

Abstract

[0035] A method and a device are provided for production of a brochure (1). At least one contents sheet (5) and a cover sheet (4) are arranged one above the other, joined and folded in a folding device (6). The method and the device shorten the production time for the brochure. This is accomplished in that the contents sheet (5) and the cover sheet (4) are placed in separate guide planes (7, 8) before folding, these guide planes (7, 8) lying one above the other at a distance from one another in the vicinity of a folding device, in that a stripe of glue is applied by a joining means supply device (3, 13) for joining the sheets (4, 5) before folding, and in that the folding device (6) is moved in such a way that the sheets (4, 5) are joined and folded simultaneously, where the folding device (6) operates at the same time as a joining device.
